

Variation ISA et corrections

	Pression	Température
Loi de variation ISA	½ tous les 5500 m	-0,65 °C par 100 m
Correction	8 m par hPa de différence avec ISA	4% de correction pour 10°C de différence avec ISA

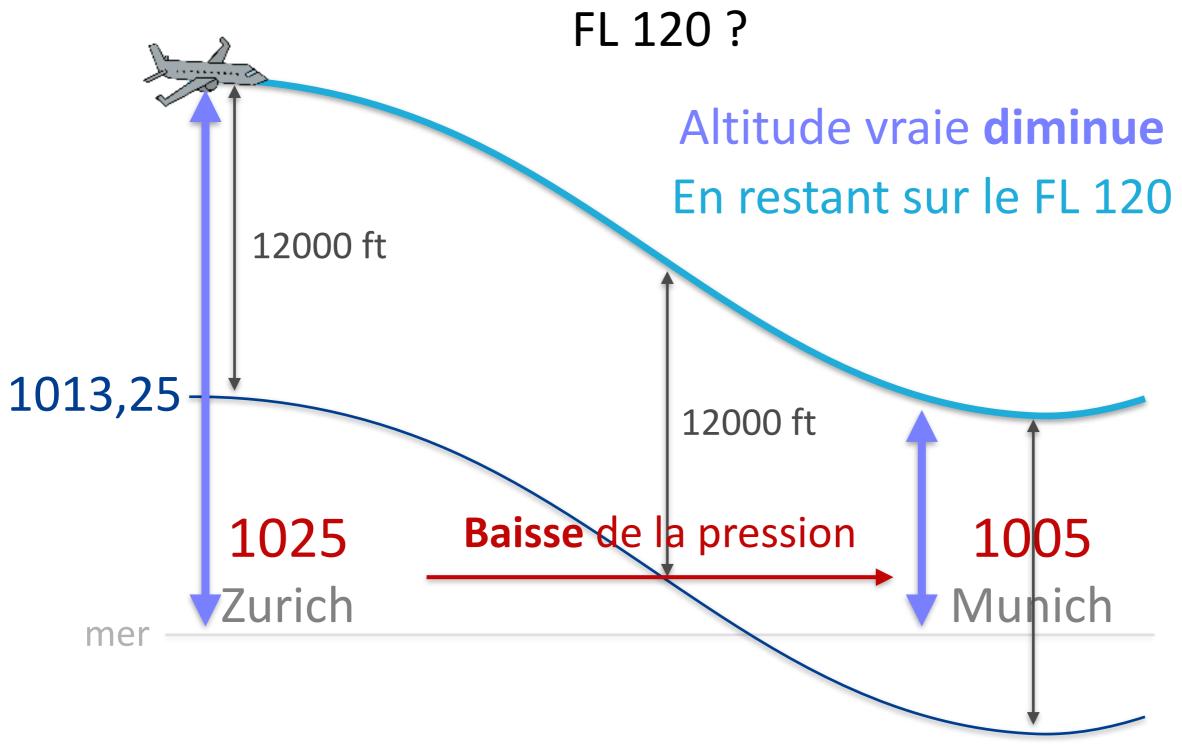

A vous de jouer!

Exercice: Un aéronef vole au niveau de vol FL 120 de Zurich (QNH 1025 hPa) à Munich (QNH 1005 hPa).

Est-ce que l'altitude vraie au-dessus du niveau de la mer va changer

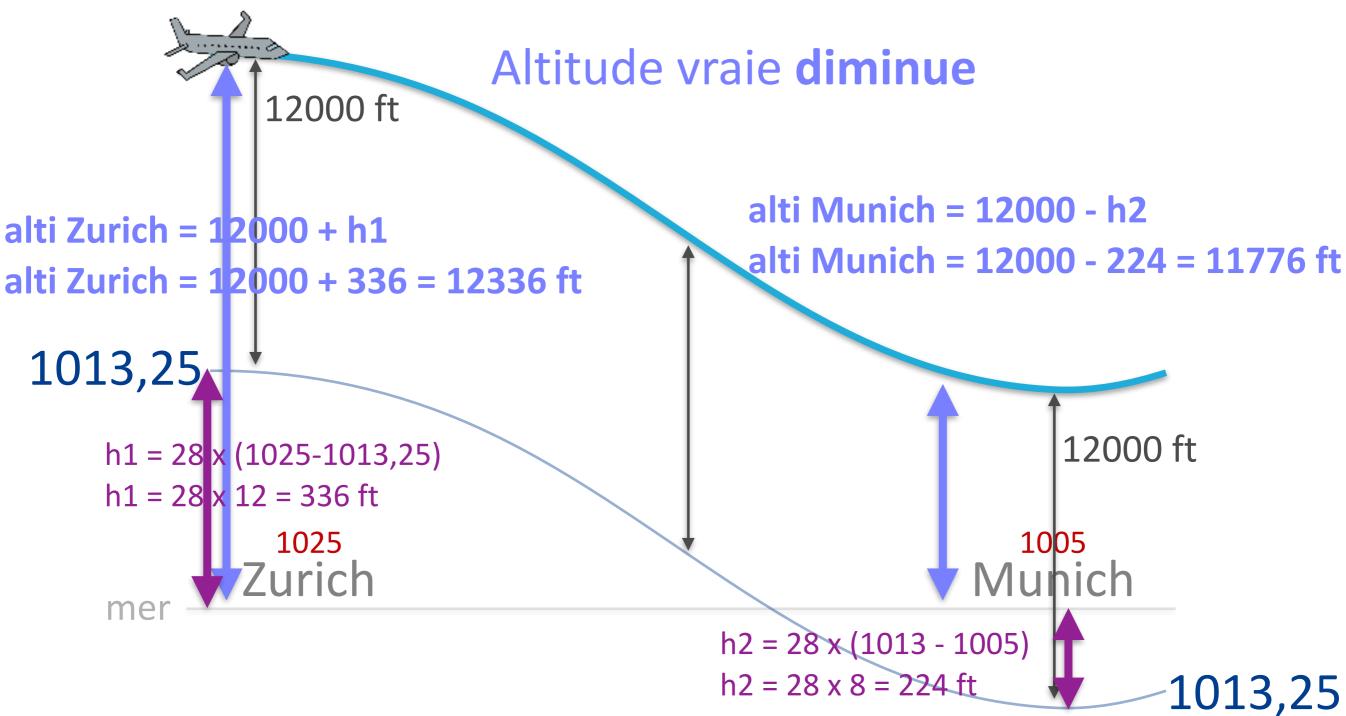

(toutes choses égales par ailleurs) pendant que l'aéronef se trouve au FL 120 ?

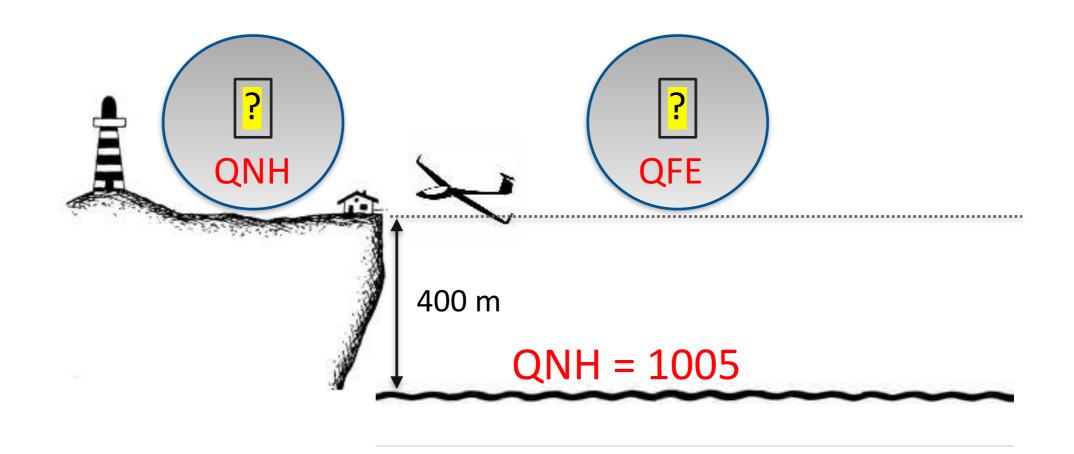

Calcul de l'altitude vraie à Zurich et à Munich

Exercice : nous sommes à Bex, altitude 400 m. Qu'indique l'altimètre si on le règle sur la valeur du QNH? Et sur celle du QFE?
